

Current Projects

Carrying our reputation through from successful projects delivered, both for new builds and refits, ANT have an impressive list of current work-in-progress. As shown here this includes a wide and varied range of Superyachts. If you are looking for a company that will deliver state of the art technological solutions, integrating this technology across your yacht, you need to talk to us.

The [ANT] Pedigree

As a company we have a long tradition and history of successful projects in the Superyacht market. From the late 1980's to the present day we have dealt with all the major shipyards in Europe and around the globe.

As integrators of state of the art marine electronics and systems we have a reputation built on the fact we have been involved in more prestigious, high value and complex new builds and refits than many of our competitors.

As an independent company we are able to source from all four corners of the globe. This means we are completely impartial when specifying equipment. Our solutions are matched to our clients direct needs and not the other way round.

Because of our history and involvement in a diverse range and size of projects we bring you unrivalled expertise, capable of taking an assignment from initial enquiry to installation and commissioning. We can also continue our involvement through our service and support offer, with teams ready to fly out to your vessel, wherever you are.

It is this unrivalled pedigree that makes us the technology integrator and provider of choice for many shipyards, project managers and owners around the world.
